# MG-02 VPC G12(x) MANUAL FIXTURE KIT | WITH CHANGEABLE CASSETTE

The current standards of modern electronics mean that it is important to guarantee high quality through accurate electrical testing. This requires a reliable electric connection between the testing equipment and the product under test (UUT). MG Products has developed a series of linear test adapters especially for this purpose: the MG series test adapters. The reliability and accuracy of a test adapter are strongly determined by its mechanical construction. This is why MG Products uses solid aluminium parts.

We have created a unique mechanical click system using ball bearings and guiding sleeves. The UUT is connected to the spring contact pins that are connected to the testing environment in a completely linear fashion. Connecting the UUT to probes can be approached both from the top and the bottom and, optionally, even from the side. The ergonomic housing provides generous space for additional measuring electronics. The Backplane is suitable for mounting a Virginia Panel Cooperation G12 or G12X ITA Interface (not included) and bottom is applied with plastic slides.

## FEATURES

- Linear click system with ball bearings, using gas springs
- 10 mm ESD-proof top cover with aluminium reinforcement bars
- Steel base cabinet with detachable CEM Backpanel for VPC G12(x) ITA frame mount
- Detachable interchangeable case system with an 8 mm spring loaded probe protection cover
- Base cabinet fitted with a telescopic guide rail and catch

## TECHNICAL SPECIFICATIONS

- Max. number of probes (2000N) 1300 units
- Max. PCB height: 60 mm
- Linear travel: 12 mm
- Max UUT: 306 x 248 mm (wxd)
- Outer dimensions: 470 x 490 x 100 x 170 mm (wxdxh1xh2)
- Designed for changeable cassette

## PRODUCT CODE

- 50112 MG-02 VPC G12(x) Manual Fixture Kit
- 50202 MG-02 VPC G12(x) Changeable cassette
